

Electro/Set.® The most versatile line of electronic keyboards in the industry.

Even before we added the new Electro/Set 450 correction terminal to the line, we had the best accepted perforating keyboards in the market. Ask the operators — these heavy-duty keyboards consistently meet deadlines under the most demanding conditions with minimum effort.

There's an easy-to-use, easy-to-understand, operator-oriented Electro/Set unit to match every phototypesetter and linecaster there is — ours or anybody else's.

We have keyboards with programmable multiple code keys. Each of 16 keys can generate a string of up to 64 codes from one keystroke.

We have an automatic counter, producing justifiable 6, 7, or 8 level tape for all unit or non-unit type faces.

We have visual displays which can be used with any Electro/Set model.

And now we've got the first low-cost automated correction terminal that doubles as a production perforator. The Electro-Set 450 incorporates an

easy-to-read visual display, automatic search, and single-key-stroke editing functions to give you clean, corrected tape and the best price/performance ratio in the field.

Your VariTyper representative will help you match an Electro/Set keyboard to your exact needs. Ask him for a hands-on demonstration. Or write for our new brochure to VariTyper Division, 11 Mt. Pleasant Ave., E. Hanover, N.J., 07936.
